

# WATER DESCALER **PRO**touch

Metal Pipe  
Ø Maximum 1.5"

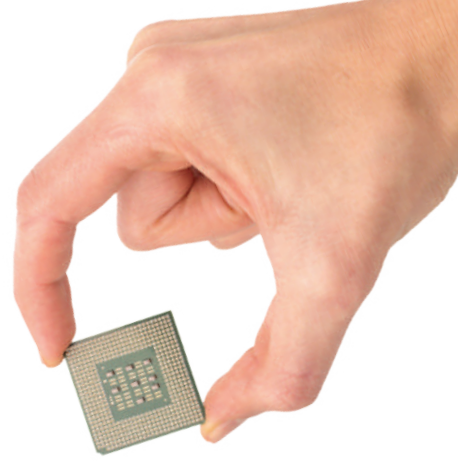

Language MP 1"/1.5" ON/OFF

IntelliScaleProtect™  
TECHNOLOGY

WATER DESCALER

IntelliScaleProtect™  
TECHNOLOGY

- Protection against corrosion and internal pipe deterioration*
- Improved water flow and overall system performance*
- Increased efficiency of water heating systems*
- Essential minerals remain preserved in the drinking water*
- Prevents scale & rust, and reduces limescale buildup in the plumbing system*
- Gradual breakdown of existing scale deposits*

IntelliScaleProtect<sup>™</sup>  
TECHNOLOGY

Spectrum's IntelliScaleProtect is a scale inhibitor, a compact electronic conditioner that uses electromagnetic field to alter the characteristics of the hardness minerals in water, preventing them from forming hard to remove scale deposits.

Hard water contains calcium and carbonate ions, when the two react they create limescale. Calcite has a high level of aggregation and adhesion, which can cause a rapid build-up of calcareous scale within pipes and connected equipment.

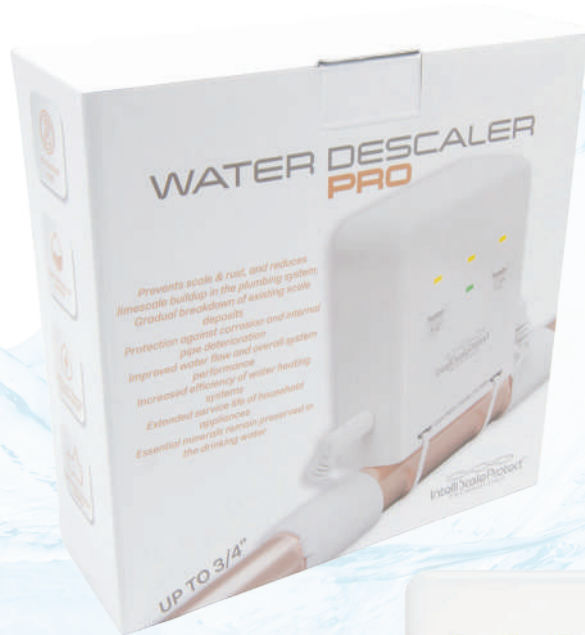

Spectrum's IntelliScaleProtect ensures that the Calcium Carbonate in the water downstream of the unit forms only as Aragonite. Therefore, protecting and preserving your pipes and connected equipment, so that it lasts longer. In contrast, even though Aragonite has the same chemical composition as Calcite, it has a low level of aggregation and adhesion, thereby preventing the build-up of scale.

**Easy maintenance.**  
**Smart technology.**  
**High performance.**

# WATER DESCALER PRO

SUITABLE FOR ALL PIPE MATERIALS  
iron, copper, stainless steel,  
galvanized steel, plastic, PE-X, and  
multilayer composite pipes

• **INSTALL IN ONLY 15 MINUTES** •

## IntelliScaleProtect<sup>™</sup> TECHNOLOGY

*Protection against corrosion and internal pipe deterioration*  
*Improved water flow and overall system performance*  
*Increased efficiency of water heating systems*  
*Essential minerals remain preserved in the drinking water*  
*Prevents scale & rust, and reduces limescale buildup in the plumbing system*  
*Gradual breakdown of existing scale deposits*
